Remember to get the assigned article and complete the 10 questions prior to class. See attached instructions.

Description/Learning Outcomes

Ever wonder if wearing sterile gloves for that procedure really made any difference at all in infection rates? How often do questions like that pop up into your head over the course of your work day? What you need is evidence that what you are doing is making a positive difference. That's evidence-based practice! Over the course of the day you will identify a practice issue of personal importance and develop a blueprint to follow to investigate that practice issue.

The learning outcome is to improve the learner's ability to develop practice questions using PICO format, to look for and judge the available evidence, and use strategies to put that evidence to work in the clinical setting.

Before you come to class...

There is a pre-reading assignment for this class to find and review a specific journal article. The details for this assignment are attached.

Target audience:

The program is geared primarily for the clinician or manager who makes a difference in the type of care provided to patients. This would include: advance practice nurses, physicians, staff nurses (especially those on policy and practice committees), preceptors, pharmacists, educators, social workers, therapists, etc.
